A shift back to rehabilitation policies and programs augmented by innovative strategies that emphasize cultures of care, and in the cases of system-involved girls, 'gender-responsive' programs, anchored in feminist literature. These programs have also caught the attention of feminist scholars who cast doubt on both their design and implementation. Gendered injustice offers a unique contribution to the latter line of scholarship, and critically examines claims of innovation, empowerment, and gender responsiveness. Invisible Punishment - Catherine D'Ignazio and Megan Klein 2019-09-19 Data feminism is emerging as one of the most exciting and important emerging fields in data science. Drawing on intersectional feminist thought, this book shows how data feminism in action, D’Ignazio and Klein show how challenging the male/female binary can help challenge other hierarchical (and empirically wrong) classification systems. They explain how, for example, an understanding of emotion can expand our ideas about effective data visualization, and how the concept of invisible labor can expose injustice, improve health outcomes, and topple governments. But it has also been used to discriminate, policy, and surveil. This potential for good, on the one hand, and harm, on the other, makes it essential to ask: Do we need data science? Who should be able to use it? How should we use it? What is data science? This book provides a clear overview of and insight into the many and varied roles available. From a neighbour's police officer or a detective, to a negotiator or a scene of crime officer, the book describes the different roles are involved in and contribute to a single investigation, and self-assessment questions relating to each role the reader's understanding.
